

Sage 300 CRE Connector

Product Overview

The Sage 300 CRE Connector for Concur keeps your Concur and Sage data updated and synchronized while eliminating the need to manually update and maintain the same information in both systems.

Key Features

- Cloud based, no need for individual workstation installs or updates
- Scheduling option allows for automatic syncing of data
- On demand sync option allows immediate syncing of data for time sensitive needs
- Quick and easy onboarding
- Customized data mapping options available to allow for unique customer requirements

Sage 300 CRE Connector

System Requirements

The connector is a cloud-based solution that requires an on-premises API service to be installed within your environment. This service enables the Ei Dynamics cloud platform to securely interact with your on-premises Sage 300 CRE system.

The server requirements for the on-premises API service to operate efficiently are as follows:

- Sage 300 CRE Supported Version
- Windows Server 2016 or higher
- Minimum of 16GB of RAM on the server
- Minimum of 2 processors
- IIS7 or greater
- .NET 4.5.2
